This manual contains IMPORTANT WARNINGS and INSTRUCTIONS Equipment in this manual is exclusively for painting

Equipment in this manual is exclusively for painting outposes. Bo not use for other purposes the operator shall be fully conversant with the requirements stated in this instruction manual including important warnings, cautions and operation and correct handing.

Read and understand the instruction manual, before use and retain for reference.

INSTRUCTION MANUAL (For Oversea's Sales)

Spray Gun

## ■ NEW-77

ISO 9001 JISQ 9001

CE

Main Specifications		68 bar (98 PSI) 82 1 dB(A)
	Temperature range	[5~40 °C

Our products are produced as per miernational standards (SOOM)

When ordering parts, specify gun's model, part name with ref. No. and marked No of air cap set, fluid nozzle and fluid needle

When replacing fluid nozzle or/and fluid needle for pressure feed Application, please order nozzle needle sel

Marked parts are wearable parts.

# <u>SAFETY WARNINGS</u>

### A FIRE OR EXPLOSION HAZARD

- 1. Fluid and solvents can be highly llammable or combustible.
  - Use in well-ventilated spray booth.
  - Avoid any ignition sources such as smoking, open flames, electrical hazard, etc.
- 2. NEVER use HALOGENATED HYDROCARBON SOLVENTS.

(1.1.1 TRICHLORINE, ETHYL CHLORIDE, etc.),

which can chemically react with aluminum and zinc parts and cause an explosion. Be sure that all fluids and solvents used are chemically compatible with aluminum

3 To reduce the risk of static sparking, grounding continuity to the spray equipment and object being sprayed must be maintained.

#### 

- 1. NEVER point gun in the direction of human body.
- 2 NEVER exceed the maximum safe working pressure of the equipment
- 3. ALWAYS release air and fluid pressures before cleaning, disassembling or servicing. For emergency stop and prevention of unintended operation, a ball valve installed near the gun to stop air supply is recommended

# A HAZARD CREATED WHILE COATING MATERIALS ARE ATOMIZED AND SPRAYED

- 1 Toxic vapors produced by spraying certain materials can create intoxication and senous damage to health.
- Use the gun in well-ventilated areas.
- Always wear protective eyewear, gloves, respirator, etc., to prevent the toxic vapor hazard, solvents and paint from coming into contact with your eyes or skin.
- 2 Noise level mentioned in main specifications was measured at 1.0 m behind the tip of the gun, 1.6 m height from floor.
  - Wear earplugs if required

## **⚠** OTHER HAZARDS

- 1. NEVER modify this product for any applications.
- 2. NEVER enter working areas of robots, reciprocators, conveyors, etc., unless machines are switched off.
- 3. NEVER spray foods or chemicals through the spray gun.
- 4. If something goes wrong, immediately stop operation and find the cause. Never use till you have solved the problem

## ■ INSTALLATION

### IMPORTANT

This gun should be operated by adequately trained operators only Ensure that the gun has not been damaged during transportation.

Clean, dry air should be supplied to the gun.

When you use this gun for the first time after purchasing, adjust fluid needle packing set slowly tighten fluid packing seat and loosen a bit when fluid needle set does not return smoothly, and adjust so that fluid needle set smoothly moves.

- 1. Connect an air hose to air nipple tightly.
- 2. Connect a fluid hose or a container to fluid nipple tightly.
- 3. Flush the gun fluid passage with a compatible solvent.
- 4. Pour paint into container, test spray and adjust fluid output as well as pattern width

### HOW TO OPERATE

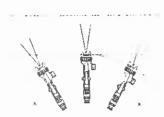

Suggested air pressure is 3.5 bar (50 psi).

Recommended paint viscosity differs according to paint property and painting conditions, 15 to 23 sec. / Ford #4 is recommendable.

Keep fluid output as small as possible to the extent that the job will not be hindered. It will lead to better finishing with fine atomization.

Set the spray distance from the gun to the work piece as near as possible within the range of 200-250 mm (8-10 in).

The gun should be held so that it is perpendicular to the surface of the work piece at all times. Then, the gun should move in a straight and horizontal line. Arcing the gun causes uneven painting.

# MAINTENANCE AFTER PAINTING

#### **△ WARNING**

-TURN OFF AIR AND COATING MATERIALS TO THE GUN AND RELEASE PRESSURE BY TRIGGERING THE GUN BEFORE DISASSEMBLING, CLEANING OR SERVICING.

-PAY ATTENTION WHEN DISASSEMBLING SPRAY GUN SINCE YOU MUST TOUCH SHARP PARTS.
-DO NOT DISASSEMBLE WITHOUT RECEIVING ENOUGH KNOWLEDGE AND EDUCATION.

- 1 Pour remaining paint into another container and then clean paint passages and air cap. Spray a small amount of thinner to clean paint passages. Incomplete cleaning will cause adverse pattern shape and particles. Clean fully and promptly two-component paint after use.
- 2.Clean other sections with attached brush soaked with thinner and waste cloth.
- 3. Clean paint passages fully before disassembly.
- 4. Remove fluid nozzle after removing fluid needle set or while keeping fluid needle pulled, in order to protect seat section.
- 5.While keeping fluid needle set inserted, tighten fluid needle packing set by hand. Then tighten gradually by spanner. Adjust packing set while pulling trigger and watching movement of fluid needle set since too much tightening will slow down movement of fluid needle and result in leakage from up of nozzle.
- If tightened too much, turn counterclockwise to the sufficient position without stuck needle and fluid leakage
- 6. Turn pattern adj. knob counterclockwise to fully open. And then tighten pattern adj. guide into gun body.

#### △ CAUTION

- -NEVER USE COMMERCIAL OR OTHER PARTS INSTEAD OF ANEST IWATA ORIGINAL SPARE PARTS.
- NEVER IMMERSE THE WHOLE GUN INTO LIQUID SUCH AS THINNER.
- -NEVER DAMAGE HOLES OF AIR CAP, FLUID NOZZLE AND FLUID NEEDLE

### TROUBLESHOOTING

R1 religition R2 adjust R3 : clean

Spray Pattern	Problems	Remedies
	Air enters between fluid nozzle and tapered seat of gun body,	Remove fluid nozzle to clean seat. If it is damaged, replace nozzle.
Fluitlenng	Air is suctioned from fluid needle packing.	Tighten fluid needle packing.
Crescent	Paint buildup on air cap partially clogs horn holes.     Air pressure from both homs differs	Remove obstructions from hom holes. But do not use metal objects to clean hom holes.
Inclined	Paint buildup on air cap partially clogs horn hole or air cap center hole, or causes damage     Loose fluid nozzle	Remove obstructions     Replace if damaged.     Remove Illuid nozzle and clean seated section.
Split	Paint viscosity too low.     Fluid output too high.	Add paint to increase viscosity.     Adjust fluid adj. knob or pattern adj. knob.
Heavy Center	Paint viscosity too high.     Fluid output too low.	Reduce viscosity.     Increase fluid output.
Spit	Fluid nozzle and fluid needle set are not seated properly.      The first-stage travel of tngger (when only air discharges) decreases.	Clean or replace fluid nozzle and fluid needle set.     Replace fluid nozzle and fluid needle set.
,	Paint buildup inside air cap set.	3. Clean air cap set.

Problem	Where it	Parts to be	Cause	Remedy			
Problem	occurred	checked	Cause		FI2	R3	R
