

SPILVAC™

SIMPLE, SAFE & EFFICIENT VACUUM CLEANING

Our Australian Designed and Manufactured Compressed Air Powered Vacuums are new in the market. With state of the art internal design, Spilvac provides a more powerful and greater vacuum with optimal air flow, all while using less energy.

All our vacuum generators operate on only 80 PSI saving our customers air usage.

Vacuum clean-up becomes a breeze, no more brooms, shovels or back ache from manual labour. Save time and money with Spilvac.

SPILVAC™

Our Single Head “Drum-Lid SV-60” or SV-100 uses 60cfm but with plenty of grunt when it comes to factory clean-up, each of our Drum-Lid models comes with cartridge filter, antistatic hose & vacuum tools, all you need is the drum.

Greater Air Flow & Vacuum are to be gained using our Dual Drum-Lid series, these models use twin venturi tubes & injector nozzles to power up Spill clean-up over longer distances, choose either our SV-120 or SV-200 cfm versions. All of our models come with antistatic hose and standard filter cartridges, however we can supply a “Wet/Dry” filter option also.

Need to just get on with it, our “Ready to Go” system is available in all models, we supply an Australian made 205 litre heavy duty open top drum, complete with a 4 wheel drum dolly, & Standard Filter Cartridge (wet/dry available) added to this, we include 4 meters of antistatic vacuum hose and matching vacuum wand with squeegee vacuum floor tool.

We configure our drum vacuum generators to be either “high Vacuum” or “High Airflow” depending on our customers needs. Visit our website at www.spilvac.au for more info.

Model	Performance	
	Airflow - CFM	Vacuum - Hg
60 - High AF	145	9.2
60 - High Vac	85	15.2
100 - High AF	128	12.7
100 - High Vac	70	17
120 - High AF	288	9.8
120 - High Vac	165	15.5
200 - High AF	250	14.4
200 - High Vac	140	18
