

BURWELL ENCLOSED BLAST FACILITIES

Since 1969, Burwell Technologies have been designing and manufacturing Enclosed Blast Facilities whilst staying true to their philosophy of delivering top grade equipment, service and professionalism.

The Concrete Tilt Panel

One of the key features of Burwell Blast Rooms is the integration of concrete tilt panels.

At Burwell, we are very serious when it comes to responding to the market's requests - this feature is an alternative to either sandwich/insulation panels or stainless fabricated booths.

This panel design provides excellent noise attenuation properties, is cost effective and easy to install.

Polyurea Walls and Personnel Door with Viewing Window

To increase the lifespan of your Blast Room, the walls are all coated with a tough polyurea coating. This ensures that the walls will handle harsh treatment as you go about your job.

The door features a viewing window with a protective rubber cover to protect it from debris.

Lighting and Handrails

Burwell Blast Rooms feature LED lighting to ensure that you can see clearly at all times and in all conditions. There is simply no excuse for poorly lit and potentially dangerous blasting and painting environments.

Handrails designed to meet AS1657:2018 come as standard with all Blast Room builds including platform handrails. Your safety is our priority.

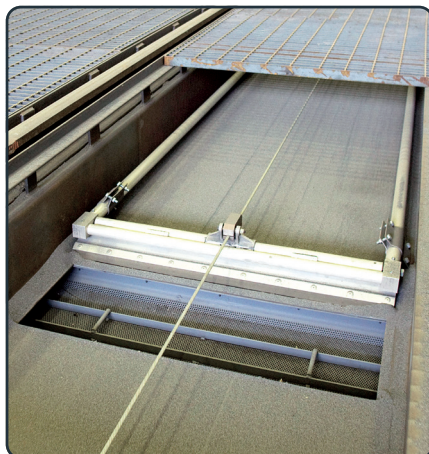

BURWELL
TECHNOLOGIES

Recovery of abrasive

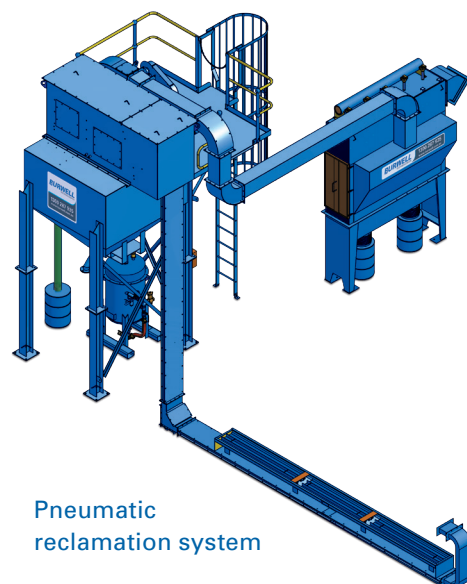

For over 50 years Burwell has been involved with the conveying and reclamation of spent abrasive within Blast Rooms.

The **Burwell Sweeper Blade Recovery System** is cost effective on both installation and operation.

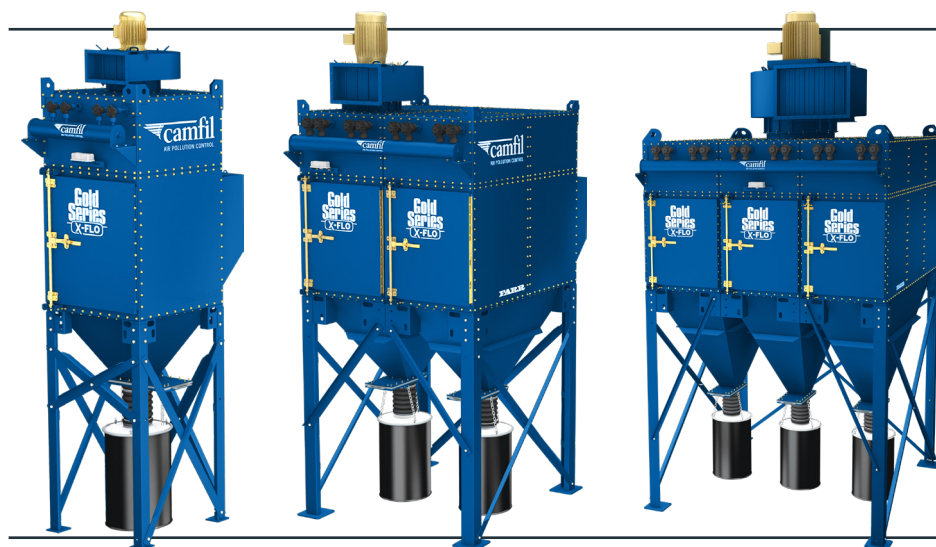

Abrasive reclamation can be achieved with either a **pneumatic** or a **mechanical system**. When you speak to one of our Blast Room experts, we can recommend a suitable system to suit your requirements.

Pneumatic reclamation system

Dust Collectors

For over 10 years Burwell have been using Camfil Dust Collection Cartridges as standard in all Blast Room installations.

Recently we announced an exclusive distribution agreement with Camfil that will now see Burwell provide maintenance and installation services for Camfil via Burwell's extensive service network across Australia.

Installation

Our team of highly skilled installers will ensure that all the sections of the Blast Facility are installed with the bare minimum of mess and fuss.

After-Market Servicing

Our scheduled service plan will save you time and money; our qualified team of technicians can inspect and service your Blast Facility to ensure optimum performance.

Conveniently located across Australia
